SUMMARY

Java Backend Developer with expertise in Java, Spring Boot, and React. Experienced in building AI-powered applications using Spring AI, RAG, and Groq LLM, along with scalable REST APIs, JWT Authentication, Docker, and CI/CD. Strong foundation in DSA, OOPs, and DBMS.

TECHNICAL SKILLS

Languages: Java, SQL

Core: DSA, OOPs, DBMS, MVC, SOLID

Frameworks: Spring Boot, Spring Security, Hibernate/JPA, React.js, Spring AI

AI: RAG, Agentic AI, LLM Integration, Prompt Engineering, AST Parsing

Databases: MySQL, PostgreSQL, Neo4j, pgvector

Tools: Git, GitHub Actions, Docker, Linux, Swagger, Jira

EXPERIENCE

Associate Software Developer

Jul 2025 – Present

Emeelan Solutions Private Limited, Bangalore, Karnataka

- Owned and shipped backend features for a live production application using **Spring Boot** and **Java**, across multiple REST API endpoints and core business modules.
- Improved **database performance** by identifying and resolving slow queries through targeted indexing and query-optimization strategies.
- Streamlined **deployment workflows** by refining CI/CD pipeline steps, reducing manual intervention and enabling faster, more reliable production releases.

Java Developer Intern

Jan 2025 – Jun 2025

CoderVu InfoTech, Indore, MP

- Built scalable backend services with **Spring Boot** and **Hibernate**; optimized **MySQL** performance via indexing, achieving 40% faster queries.
- Secured **RESTful APIs** using **JWT authentication** and **Spring Security**, with **Docker**-based CI/CD deployment.
- Leveraged **Spring AI** to integrate multiple **LLM providers** with robust error handling and fallback mechanisms.

PROJECTS

AI Legacy Bridge – AI-Powered Legacy Code Intelligence Platform

Java 21, Spring Boot, React, Spring AI, PostgreSQL, pgvector, Groq LLM, Docker

- Architected an AI platform that reduces legacy-codebase onboarding time from weeks to hours, enabling new developers and teams to understand, visualize, and safely migrate old/undocumented systems using AI-driven analysis and RAG-based responses.**
- Built a browser-side **Analysis Engine** (JS, AST parsing via Acorn/Babel + regex-based multi-language extraction) generating dependency graphs, call graphs, design-pattern detection, security scans, and health-score metrics in a single pass — feeding a **repository-isolated** Spring Boot backend scoped by `repository_id` for strict multi-repository data isolation.
- Implemented an **Agentic RAG** pipeline (chunking per function/class, local embeddings, **pgvector** similarity search) feeding into 5 specialized AI agents — Debug, Security, Migration, Risk Analysis, and Explain — powered by **Groq Llama 3.3 70B**.
- Built an IDE-style AI Explorer (Monaco editor + folder tree + AI chat) with a **Focused Mode** that scopes AI context to a selected node plus its direct/second-level dependencies, and refresh-safe session persistence (IndexedDB + localStorage) so users never lose their place.

CultivationX – AI-Powered Developer Career Growth Platform

[Live Demo](#)

Java, Spring Boot, React, Spring AI, Docker, CI/CD

- Built a full-stack AI platform (modular **Spring Boot 3.5**, 5 feature modules) integrating AI resume/ATS scoring, conversational coding mentorship, and GitHub/LeetCode data sync for personalized developer career guidance.
- Built the **LeetGit** pipeline to auto-review LeetCode submissions via LLM and publish optimized solutions with interview notes to GitHub, alongside **GitHub OAuth + LeetCode GraphQL** integration for activity/performance insights.

EDUCATION

B.Tech in Computer Science Engineering

Sep 2021 – June 2025

Shri Vaishnav Vidyapeeth Vishwavidyalaya, Indore, MP
